BookShire

A modern, containerized book management platform built with FastAPI, PostgreSQL, and Docker.

Quick Start

```
git clone <your-repo>
cd BookShire
docker compose up --build
```

Access API Docs:

http://localhost:8000/docs

Tech Stack

Backend: FastAPI
Database: PostgreSQL + PostGIS
ORM: SQLAlchemy
Migration: Alembic
Container: Docker

Project Structure

```
BookShire/
■■■ app/
■■■ alembic/
■■■ backend/
■■■ docker-compose.yml
■■■ requirements.txt
```

Database Migration

```
docker compose exec backend alembic upgrade head
```

Common Issues

1. alembic not found → add to requirements.txt

2. database does not exist → ensure DB is ready before migration
